

# Separate the chocolate

[Chinese Version](#)  
[Russian Version](#)

Tom and Derpina have a rectangular shaped chocolate bar with chocolates labeled T, D and U. They want to split the bar into exactly two pieces such that:

- Tom's piece can not contain any chocolate labeled D and similarly, Derpina's piece can not contain any chocolate labeled T and U can be used by either of the two.
- All chocolates in each piece must be connected (two chocolates are connected if they share an edge), i.e. the chocolates should form one connected component
- The absolute difference between the number of chocolates in pieces should be at most K
- In any piece, there should not be 4 adjacent chocolates that form a square, i.e. there should not be a fragment like this:  
XX  
XX

## Input Format

The first line of the input contains 3 integers M, N and K separated by a single space. M lines follow, each of which contains N characters. Each character is 'T','D' or 'U'.

## Constraints

$0 \leq M, N \leq 8$   
 $0 \leq K \leq M * N$

## Output Format

A single line containing the number of ways to divide the chocolate bar.

## Sample Input

```
2 2 4
UU
UU
```

## Sample Output

```
12
```

## Explanation

There are  $2^4 = 16$  possible separations. The 4 invalid are:

```
TT
TT

DD
DD

DT
TD

TD
```

DT

Some of the valid ones are:

TD  
TD

TT  
DD

DD  
TT

DT  
DT
