

# Matching Ending Items

\$

The \$ boundary matcher matches an occurrence of a character/character class/group at the end of a line.

*In the above image, the Regex Pattern is matched with the Test String.*

## Task

Write a RegEx to match a test string, *S*, under the following conditions:

- S* should consist of only lowercase and uppercase letters (no numbers or symbols).
- S* should end in `s`.

This is a RegEx-only challenge, so you are not required to write any code. Simply replace the blank ( `_____` ) with your RegEx pattern.
