# Ruby Array - Index, Part 2

Here are some other ways to access array objects in Ruby.

To access the elements from the end of the list, we can use negative indices.

For the array,

```
arr = [9, 5, 1, 2, 3, 4, 0, -1]
```

```
> arr[-1]
=> -1
```

- The first element of the array can be accessed using

```
> arr.first
=> 9
```

- The last element of the array can be accessed using

```
> arr.last
=> -1
```

- The first n elements of the array can be accessed using

```
arr.take(3)
=> [9, 5, 1]
```

- Everything but the first n elements of the array can be accessed using

```
arr.drop(3)
=> [2, 3, 4, 0, -1]
```

In this challenge, you have to use the syntax as explained above and complete the functions accordingly.
